OVERLEAF is given the results for the Series of Four calculated according to the method announced in advance and still in use for Slalom. Modified average is calculated by ignoring those with more than 150% of the first average and order is decided by whichever gives the best result - best event, average of best two less 10 or average of best three less 15.

ALSO, as these will be required for the B.C.U. rapid river ranking list, are given the percentages calculated by the new B.C.U. R.R. method - modified average ignoring those with more than 120% of the first average. For their list the B.C.U. will use the average of the best two less 5 or the best three less 7 and we will no doubt adopt this method next year.
